

# Poker Table Installation

## Safety

Table weight is 2,100 lbs. Use rated equipment and trained installers. Recommended installation is a forklift.

## Installation

LIFT WITH PADDING ON FORKS TO AVOID DAMAGE TO CONCRETE!

Pink packaging foam can be used to pad forklift forks. Metal contact with concrete can cause chipping.

After removing packaging table may be lifted with padded forklift forks under table top.

Set table in place in desired orientation. Shim under table leg if needed to level using 4" ceramic tiles or similar non-biodegradable shims.

Install supplied hold down brackets if additional security is needed. Table is stable and can't be moved without equipment with or without brackets.
